

2002 SB 14 SUMMARY PROGRESS REPORT DATA

The following hazardous waste data was taken from the 2002 SB 14 Summary Progress Reports (SPRs) prepared and submitted by California generators. This data is based only on those SB 14 reporting facilities and does not necessarily represent the industry as a whole. Additional SPRs are currently being added to this database.

These industries represent some of the largest hazardous waste generators in California including Department of Defense sites. DTSC has also conducted assessments for most of these industries during the past few years.

These SB 14 reporting facilities represent a range of industry types and sizes. They are large and small facilities, some are international in scope with employees worldwide and others are small businesses with only a few employees. The trend for all these facilities has been an overall reduction in hazardous waste generation during the period 1998 to 2002.

Industry Ranked by Greatest Percentage Hazardous Waste Reduction 1998 to 2002

SIC CODE	TYPE OF INDUSTRY	# OF FACILITIES REPORTING	1998 TONS	2002 TONS	% REDUCTION
9711	National Defense	10	80,294	36,860	54%
2911	Petroleum Refining	7	8,060,184	6,615,371	18%
2821	Plastic Materials & Resins	7	5,147	4,412	14%
3471	Metal Plating & Polishing	49	356,643	334,427	6%
3728	Aircraft Parts and Equipment	10	59,927	56,274	6%
2819	Industrial Inorganic Chemicals	7	1,193	1,191	.1%
